

PHARMACY TECHNOLOGY

The count and the route.

Trayroute makes the tools technicians use at the bench and on the road. One product keeps a lost count. The other turns a shelf of bags into a shorter round.

BENCH

Smart counting tray

A running total while the technician counts. No restart. No full machine.

ROAD

Route app

Scan the address on the bag. Leave with the doors in order.

The count gets lost. The bags leave in the wrong order.

PROBLEM AT THE BENCH

00??

A hand count is easy to lose. Starting over wastes the fill. A fully automatic machine takes the count away from the person who is supposed to check it.

PROBLEM ON THE ROAD

3

Bags sit in the order they were filled. The driver sorts doors from printed labels and spends the miles.

Keep the number. Scan the bag.

WHAT THE TRAY SOLVES

The lost count

The smart pill counting tray is a traditional blue pharmacy tray with a spatula, an acrylic channel, and a digital display. Tablets are pushed into the tube in groups of five, and the counter keeps the running total so the technician can finish the count.

WHAT THE ROUTE APP SOLVES

The shelf order

The Route app scans the address printed on each prescription bag, keeps signature, refrigeration, and counseling with that stop, and builds a shorter multi-stop round from the pharmacy and back.

PRODUCT

The tray counts.

The spatula pushes tablets left, into the acrylic tube.

The display climbs by fives and holds the total.

The red button clears the display and returns the tablets to 0000.

The technician still makes the count. The tray remembers it.

PRODUCT

The address is already on the bag.

1 Scan

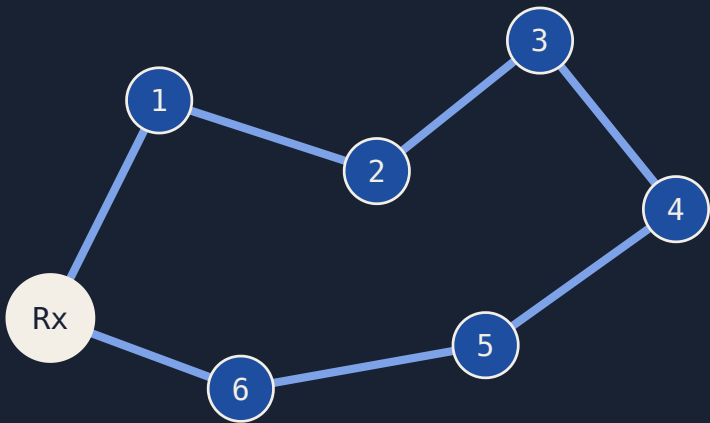

Read the label. Signature, refrigerated, and counseling stay with that stop.

2 Optimize

Build the round from the pharmacy, door to door, and back.

3 Drive

The driver leaves with the order of doors already set.

YEAR IS THE PLAN MOST PHARMACIES KEEP

From the bench to the door.

01

Bench

Count on the tray. The display holds the number.

02

Reset

Press red only when that count should start over.

03

Bag

The finished prescription gets a labeled bag.

04

Scan

The Route app reads the address on the bag.

05

Round

Stops line up from the pharmacy and back.

06

Door

The driver runs the short route, then returns the van.

18,988 independent pharmacies in the U.S.

Those stores already count and already deliver. Trayroute sells a tray for the bench and a route app for the driver. The marketplace figure is pharmacy sales, not software spending.

SOURCE: NCPA 2026 DIGEST, SPONSORED BY CARDINAL HEALTH

Reach each building.

01

Email

A note to the owner and the technician who counts.

02

Meta ads

The tray and the route in front of pharmacy people.

03

Brochures

A printed piece sent to each building.

04

Phone calls

A call to the store, then a time to see the tray.

05

Door to door

Walk in, set the tray on the bench, leave the route on the phone.

A few hundred, then five thousand.

YEAR 1

Manufacture

Manufacture the tray and sell it to the first few hundred stores.

YEAR 2

5,000 stores

About 1 in 4 independents, or about 1 in 10 retail pharmacies.

YEAR 3

Wider

More retail stores, and more target areas.

Hardware on the bench. Software on the road.

COUNTING TRAY

Sold once, to the pharmacy. The reset button is part of the tool. It is not a meter.

ROUTE APP

Free at \$0, Shift at \$12 a month, Year at \$96 a year. Year is the plan marked most used.

ILLUSTRATION, NOT A RESULT

\$2.25M

15,000 trays × \$150 profit each. That is the profit if each tray leaves \$150. It is not revenue, a price list, or a forecast.

The middle path.

Hand tray

Cheap and familiar. The number lives in the technician's head, and a lost count starts over.

Automatic counter

Fast. The machine owns the count, so the person at the bench is no longer the check.

Generic route app

The driver types every address. The bag already has the address printed on it.

Trayroute

The tray keeps the running total. The Route app reads the bag and sets the doors.

TRAYROUTE

The tray counts. The route is the short one.

Built for the people who fill and the people who drive. Pharmacy owners keep the count and the route in one company.
